

## OUR VISION

---

**THROUGH OUR PEOPLE AND CUSTOMER RELATIONSHIPS, WE  
DELIVER QUALITY, CABLING SOLUTIONS, INNOVATION AND VALUE  
ADDED SERVICES**

## 服务和功能

- 使用条款和隐私声明更新
- 您可能疑惑为何会收到此电子邮件
- 消费类在线产品和服务均受 服务协议 的约束。
- 您之所以收到此电子邮件，是因为 正在更新 服务协议，以明
- 确我们的条款并确保此类条款对 用户保持透明，同时也是为了
- 涵盖您使用的其他 产品、服务和功能

# Abertrack

- Aberdare is proud to introduce an innovative radio frequency identification cable management system
- Abertrack was designed to assist with safeguarding , tracking , tracing and the management of cables
- It will combat cable theft on your premises , manage your cable yard optimally and enable you to cut operational costs substantially
- All Aberdare drums are now being pre – tagged with transponders

# AberTrack?

- Allows for:
- The monitoring of goods from the time of invoicing at any Aberdare site to the arrival at the customer's location. (Atlas – ARB )
- Accurate, real time inventory location recording.
- Real time inventory receipting capabilities
- Continuous inventory tracking and recording of .....
- 1. *positional movements*
- 2. *location movements*
- 3. *time of movements*
- 4. *number of movements*
- Monitors processing time i.e. factory bay to warehouse - from time of expediting to actual loading times etc. enabling visibility to manage process efficiencies.
- Visibility when inventory movements occur.
- Reduction of heads - inefficiencies - transactional and inventory errors.

# AberTrack

- Since implementing the system at Aberdare and certain customers, it is evident that it has become a theft deterrent
- With “ring fencing” unauthorised movement of product from dedicated areas is virtually impossible
- Instant Notifications are sent via SMS or email and can be configured to suit requirements
- National monitoring for sightings and readings of stolen drums.
- Currently in negotiations with government to install readers at key locations i.e. Toll gantries etc.
- Each drum of cable has a unique identification code linked to the actual product
- This code could either be reassigned or terminated after the cable has been consumed
- Transactional history stored for purposes of audits and tracing, if and when required
- Web interfacing makes it possible to perform inventory management remotely
- Contributed to the reduction in operational costs

# How Does the Technology Work?

# AberTrack

- AberTrack offers a wide range of functionalities. The System consists of hardware, data and software.
- It's unique capabilities allows for the customer to choose and define their own requirements and system specifications, thus allowing the customer to choose the solution that best suits their business.
- Hardware:
  - The required hardware will be installed at the cost of Aberdare Cables; the hardware will consist of a number of readers. The quantity and range of the readers installed will be dependent on the solution required by the customer.
- Data:
  - All data collected from the readers installed at customer sites will be managed, stored and protected in terms of the Aberdare Cables policies and procedures. All data will be confidential and only available to specified authorised users.
- System:
  - The AberTrack system has been designed by Aberdare Cables to allow for easy usage, reporting and analysis. The system is real time and therefore an very effective tool.
